Infy Interview

Sample report

What the placement cell sees for a batch, and what each student gets after one AI mock interview.

- Placement cell: leaderboard, advisory summary, feedback heatmap, section-wise analysis, pipeline and pass/fail
- Student: overview, question-wise feedback, analysis, skills and an action plan

Leaderboard for one interview

Example data from Infy Interview. Roll numbers and names are illustrative. Scores are indicative: a guide to who needs more practice, not a final grade.

Advisory summary: batch insights and recommendations

Advisory Summary – Key Insights from Interview Performance

Last Generated At : 12/5/2025 | 03:00 pm Generate

The current performance trend indicates that while knowledge and confidence levels are relatively strong, there is a consistent drop-off in fluency, articulation, and professionalism. These are critical soft skills, and the data suggests they're acting as bottlenecks for many students, especially when interviews require spontaneous or structured expression.

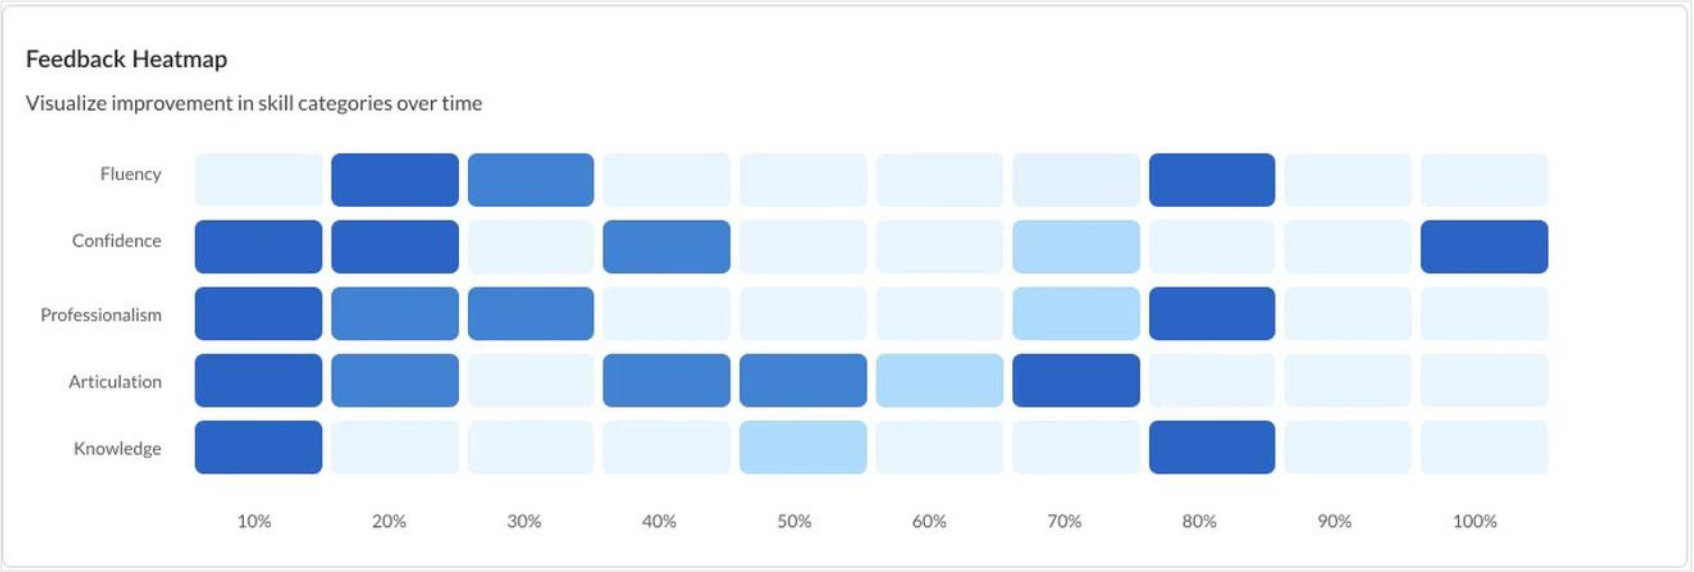

Although **78% average score** and improvement rate suggest decent learning momentum, a closer look reveals that only **21% (42/200)** of students are genuinely excelling. A significant portion **(35%)** fall into '**Needs Work**' or '**Poor**' feedback, indicating surface-level improvements rather than deep skill development.

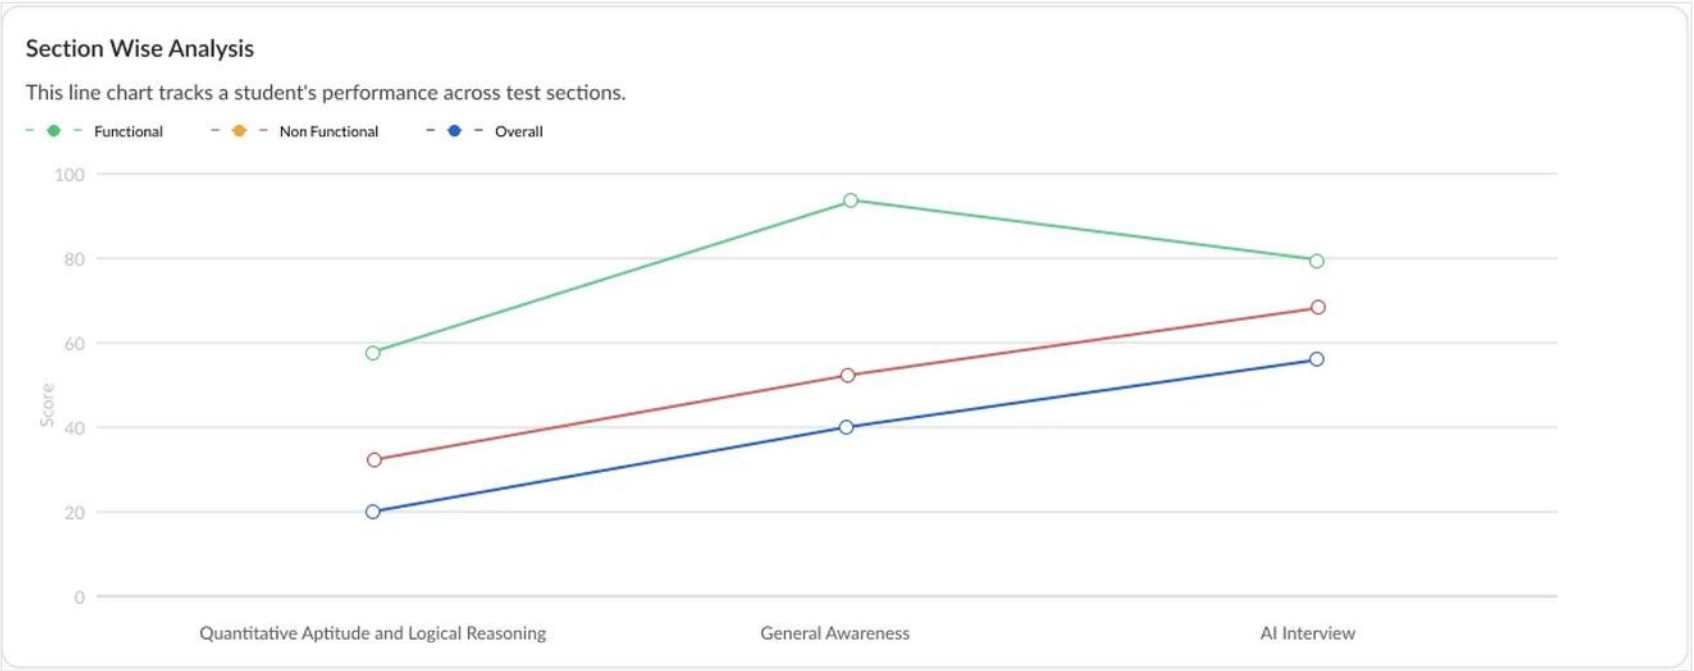

Student-led interviews, which test initiative and autonomy, show the lowest average performance, suggesting students may struggle without scaffolding. In contrast, students perform best in Mock Interviews, where structure and simulated realism provide support - this can be leaned into for practice but should be balanced with more autonomy-building formats.

🔍 **Recommendation:**

- Double down on communication training - especially articulation and fluency.
- Introduce low-structure, spontaneous formats gradually to build student-led confidence.
- Reduce focus on foundational knowledge drills for now - it's not the primary blocker.
- Segment and support the middle performers who are close to excelling - they'll move the overall batch forward fastest.

Feedback heatmap and section-wise analysis

Candidate pipeline and pass/fail summary

Candidate Pipeline Breakdown

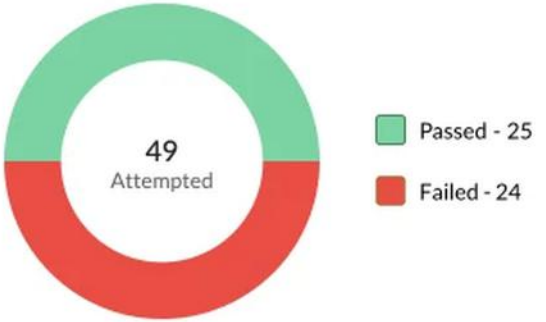

This section provides a detailed view of the student pipeline, from invitations to test completion, helping to track progress at every stage.

- Candidates Invited - 50
- Test Attempted - 49
- Test Completed - 25
- Test Incomplete - 0
- Test Terminated - 0

Test Performance Summary

This section presents the overall test outcomes, including the pass/fail ratio and total number of candidates evaluated.

Overview

AI Interview | Product Manager

Overall interview performance · Indicative

Role **Product Manager** Company **Startup** Interview type **Job Role Interview** Difficulty **Easy** Duration **4 min 23 sec**

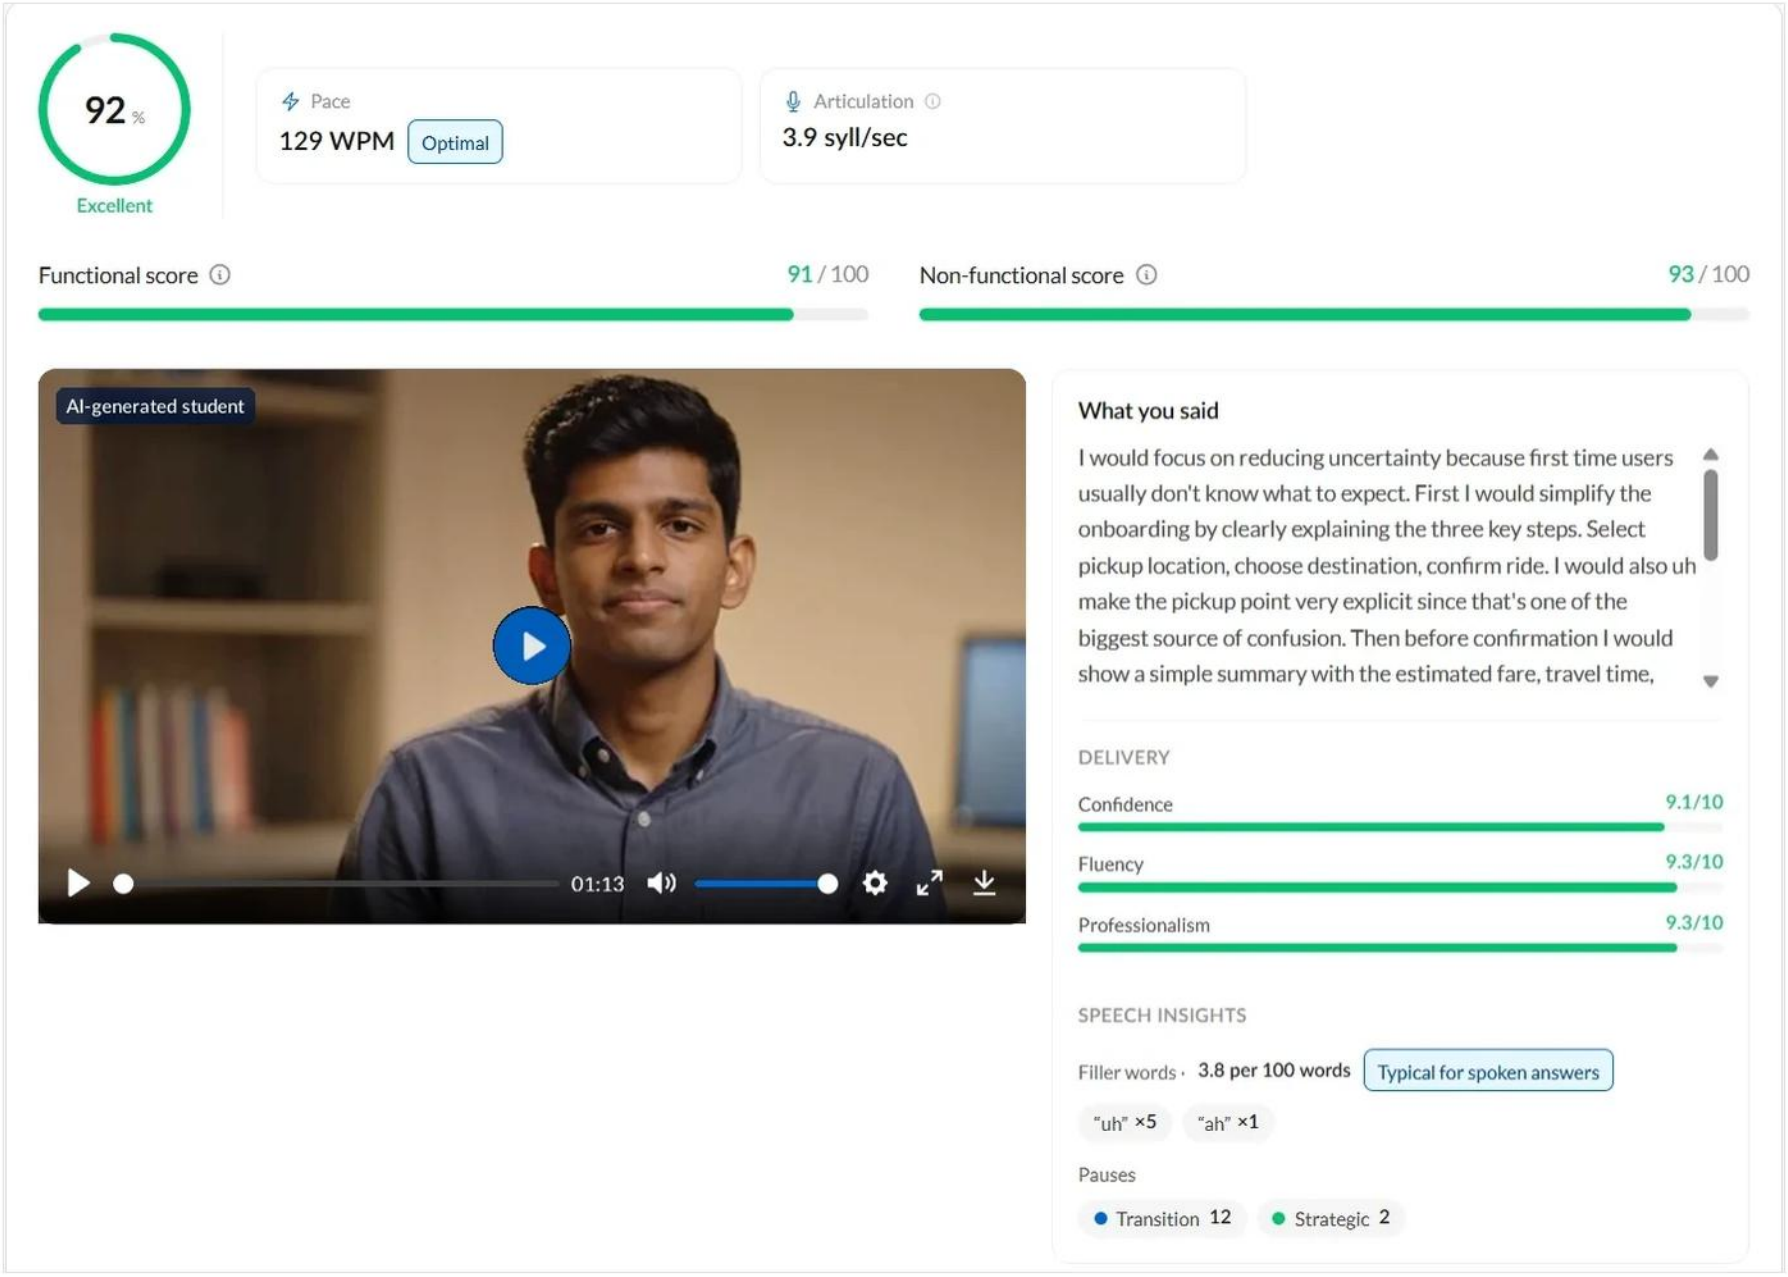

Overview | Analysis | Skills | Question-wise | Action Plan

Summary

Functional score	Non-functional score
90 / 100	91 / 100

The candidate communicates like a structured, metrics-minded Product Manager. They consistently anchor answers in a clear user or business problem (e.g., "reducing uncertainty" for first-time users) and propose practical interventions across the journey, then close with measurable success criteria (completion, cancellations, incrementality). Their organization is strong and easy to follow. The main opportunity is tightening sentence construction and removing filler/restarts so key ideas land with maximum clarity and authority.

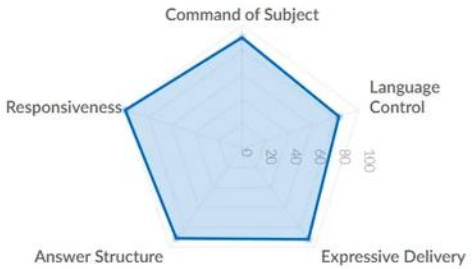

Question-wise: one answer, its recording, transcript and delivery

Analysis: how the score was built, and delivery

How you were scored

Command of Subject · Language Control · Expressive Delivery · Answer Structure · Responsiveness

Each spoke is one dimension, scored out of 100. A larger, more even shape means a stronger, more balanced interview.

STRONGEST AREA
Responsiveness · 100 / 100
How you handled the ask · carries 8% of your overall score.

Your overall score is the weighted average of these five dimensions. The percentage on each row is the weight it carried, already adjusted for how much of your interview that dimension could be measured on. Weights are set by the role profile before the interview, not after it.

C **Command of Subject**
What you said
45% — 90 / 100 — Excellent

The substance of your answers - how accurate, deep and on-topic your responses were. This is the single most important dimension for a role-based interview.

45% of the overall score. Carries the most weight because a role interview is decided first on whether the answers are correct and complete. This is the weight after adjusting for how much of the interview this dimension could be measured on.

Knowledge 87 / 100
Relevance 100 / 100

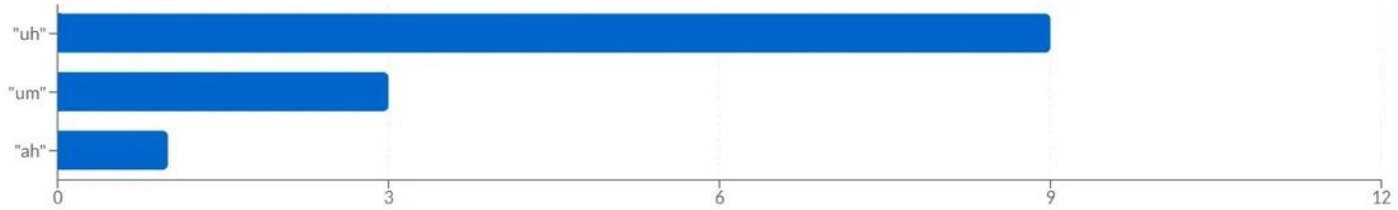

What went well

- User-Problem Anchoring with Clear Product Intent: In the ride-booking question, the candidate opened with a crisp problem statement - "reducing uncertainty because first

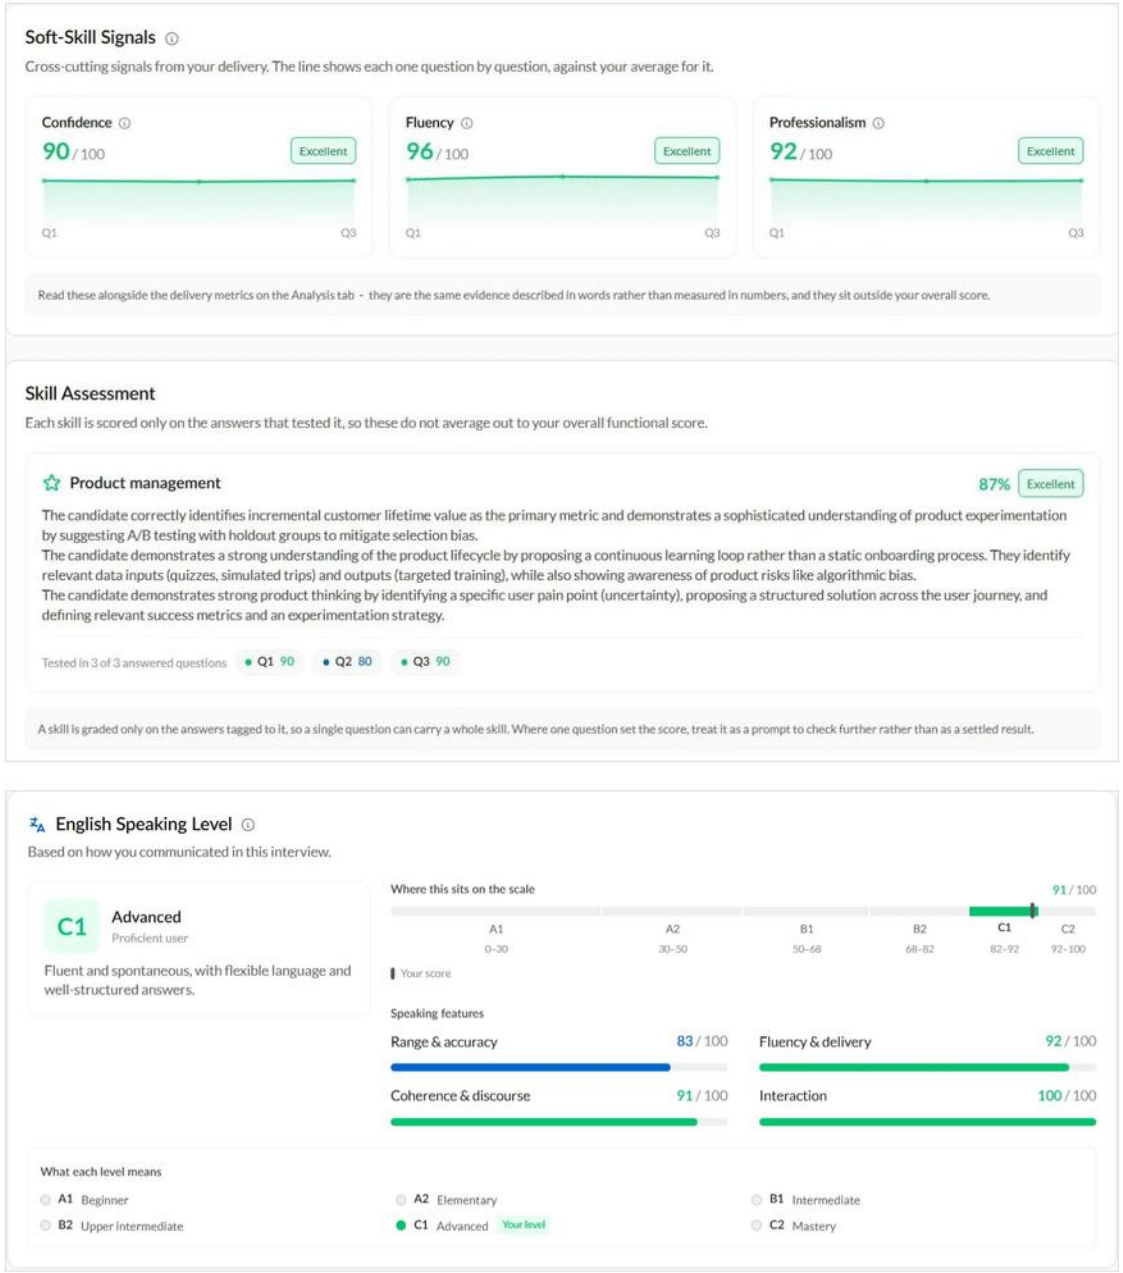

Delivery Metrics

Filler Words — 3.2 per 100 words — Typical for spoken answers

13 fillers across 405 words. Benchmark: under 2 per 100 is clean, 2–5 is typical, above 5 is worth reducing.

Skills: soft skills and English speaking level

Action plan

Your Action Plan

Practical next steps from this interview, in no particular order - start with whichever ones serve the focus below.

START WITH **Command of Subject · 90** / 100

What you said - it carries 45% of your overall score, so gains here move the total further than anywhere else.

1. Create a 30-second template per question type (User problem → 2 solutions → KPI → experiment) and rehearse it until it fits naturally within 60–75 seconds.
2. For each solution you propose, add one root-cause sentence starting with "because..." (e.g., why pickup points are confusing) to strengthen reasoning evidence.
3. Build a personal KPI glossary for the product's core journeys and practice saying full metric names + simple formulas (e.g., first-ride conversion = completed first trip / new signups).

Two at a time

Take the first two items into your next interview rather than all of them. A plan that gets finished beats a plan that gets read.

Out loud, not on paper

Pace, pauses and filler words only move with spoken practice. Rehearse each answer aloud and time yourself.

Re-answer, then compare

Answer the same questions again and read this report's delivery metrics against your first attempt.
